

Functional Testing:

- Tested all the links to related pages on the website.
 - Checked that all hyperlinks were working and referenced correctly.
- Made sure all the html elements are displayed on the website the way we want (have the right position and styling).
- Checked all the functions run properly.
- Utilized the developer console in Google Chrome to test out compilation functions
- All the screenshots of some testing we did are in the Github folder, Documents > Testing, and as well Documents > Testing > Sandpiles

Usability Testing:

- Asked a friend to evaluate how easy it is to use the website.
- Provided a manual with clear instructions.
- Checked the design for consistency.
- Checked content for errors and typos.

Interface Testing:

- Checked that website is accessible through AWS and there are no error messages.
- Checked that all photos were available and visible (no error messages on the photos

Compatibility Testing:

- Tested the access to the website from different devices, operating systems, and web browsers.
- Checked formatting on different window/grid sizing
